Revision: 1.0

DISTANCE LEARNING WEBPAGE

A webpage has been developed as a platform to make the learning material more accessible to students. This material includes:

- Topic summary and learning objectives
- PowerPoint slides
- Video recordings by lecturers
- Additional resources
- Sample questions

It has been developed by INVICTA's team in a combination of HTML, JavaScript and CSS.

As well as enhancing the learning material it could be further developed to allow for a link to forums and encourage discussion (e.g. to allow commenting through Facebook).

This could also be further developed to be opened on mobile phones as an app.

The following instructions give a general understanding of how to open the webpage on a computer and access its content.

Figure 1 shows the sample welcome page and general design. There is a menu with all sections that is divided into:

- Introduction: Gives the user a general idea of the performance of the web app.
- Topics: In this section the user can run the distance learning material, such as presentations and video tutorial.
- Additional material: Provides the user with extra exercises in case the user wants to deep in any area.

Instructions

A copy of the web app has been provided in a ZIP file. In order to run such app, these instructions must be followed.

1. Download the ZIP file.
2. Decompress the invicta_app_MSc folder into the computer desktop folder.
3. Open the file MSc_online_course.html with Google Chrome (located in invicta_app_MSc-public_html).

This will work in other browsers but opens the best in Google Chrome.

Welcome

Welcome to the course.

There are three topics as part of this Distance Learning module, created between the University of Strathclyde and INVICTA Ltd:

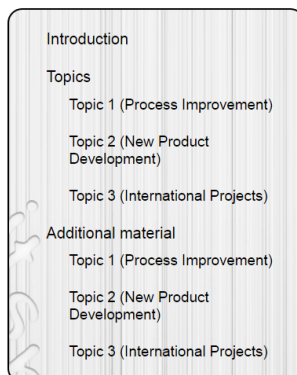

Topic 1: Managing Process Improvement Projects

Topic 2: Managing New Product Development Projects

Topic 3: Managing an International Project

Now click on the "Intruction" to start the course

FIGURE 1: SAMPLE WEB SITE WELCOME PAGE

Introduction

This website aims to allow easy access to the core learning material. This includes:

- Topic summary and learning objectives
- Powerpoint slides
- Video recordings by lecturers
- Additional resources
- Sample questions

In the section "Topic" you can find the three section of this course, you should fist complete the theory material and afterwards, in the "Extra material section" complete the exercises exposed.
